

ABDALLAH MAHMOUD SHABAAN

Unity AR/VR Developer | Enterprise & Educational Simulations

Cairo, Egypt (GMT+2) • +20 100 963 4712 • abdalla1997@yandex.com

Portfolio: [yoursite.com] • [LinkedIn](#) • [GitHub](#)

English: Professional working proficiency • Arabic: Native • Available for remote contract & freelance work

PROFILE

Unity developer with 6+ years building AR and VR applications for education, enterprise training, and brand activations. I take projects from prototype through store deployment: XR interaction systems, AR marker and plane-based experiences, multi-language RTL/LTR interfaces, and modular architectures that clients can extend after handover. Shipped work for publishing, advertising, and enterprise clients across Egypt, the UAE, Saudi Arabia, and Kuwait.

WHAT I BUILD FOR CLIENTS

- VR training & safety simulations — branching scenarios, scoring, and performance feedback (Meta Quest, OpenXR, SteamVR).
- AR product & education apps — marker tracking, runtime 3D instantiation, interactive learning modules (AR Foundation, Vuforia, ARCore).
- Interactive installations & event activations — touch-screen games, multi-device setups, LAN-linked mobile-to-PC experiences.
- Unity systems engineering — localization, AssetBundles/Addressables, DOTween UI, ScriptableObject-driven content, Photon multiplayer.

EXPERIENCE

ExaRoll Studio | Dubai, UAE (Remote)

Lead Software Developer / Game Designer [Contract] | Nov 2024 – Present

- Lead technical architecture and game design for Unity 6 projects, integrating OpenXR and AR Foundation for cross-platform deployment across headset and mobile targets.
- Built a modular LanguageController that swaps TextMeshPro font assets and spacing at runtime, supporting right-to-left Arabic and English from a single UI codebase — cutting localization work on new screens to [X] minutes.
- Engineered reusable UI and spatial movement systems with DOTween, including procedural item animation and physics-based drag-and-drop.
- Shipped Shara71 to both Google Play and the App Store — a cultural tile-matching game spanning all seven UAE emirates — taking it from design through store submission and post-launch updates.
- Authored Game Design Documents and technical specs that let clients and stakeholders sign off on scope before production.

Eye Advertising | Cairo, Egypt

Senior Game Developer & AR/VR Developer [Full-time] | May 2025 – Present

- Own AR/VR delivery end to end — prototyping, production, QA, and store/on-site deployment — for brand and pharmaceutical clients, including [N] shipped activations.
- Built branching patient-education VR covering chronic kidney disease treatment journeys, with scenarios authored in-Editor via ScriptableObjects so medical teams can revise content without a developer, and a 5-star exit rating posting to a custom admin backend.
- Developed web-based AR for medical field teams — QR-entry 3D product launches, step-by-step preparation guides, and interactive clinical-trial data — running in the mobile browser with no app install required.
- Delivered [N] interactive booth games for pharmaceutical and FMCG activations: timed clinical quizzes, two-player head-to-head challenges, lead-capture forms, and photo activations built to self-reset and run unattended for full event days.
- Built virtual exhibition stands and 3D clinical data environments, plus branching 360° video playback driven by a data-driven node graph with an Editor auto-builder.

Senior Game Developer & AR/VR Developer [Part-time] | May 2021 – May 2025

- Delivered AR and VR interactive experiences alongside a full-time role, managing scope and deadlines across concurrent client projects.
- Architected cross-platform applications linking mobile AR input to a PC application over LAN, enabling multi-device booth experiences.

- Built augmented reality mechanics including runtime character instantiation and interactive joystick controls.

Nahdet Misr Publishing Group | Cairo, Egypt

Senior Software Developer & R&D Team Admin [Full-time] | Jan 2023 – May 2025

- Ran R&D team operations and Agile task management across a [N]-person cross-functional pipeline, coordinating developers, artists, and content specialists.
- Programmed 3D and AR applications for the NEOM project (Saudi Arabia) and VR Occupational Safety and Health simulations for construction site training.
- Built a Unity 3D Physics Lab simulating interactive science lessons, and a gamified workplace OSH training module.
- Engineered web-based 3D learning experiences for Rwandan educational initiatives, delivered to [N] students/schools.

AR/VR Unity Game Developer | May 2020 – Jan 2023

- Built an AR science textbook experience using Vuforia, bridging printed pages with interactive 3D augments to increase student engagement.

Gigaverse | Remote

AR/VR Developer [Contract] | Apr 2023 – Jun 2024

- Developed "Kuwaitar," an AR education app for the Kuwaiti market, covering AR interaction design, educational scenarios, and UX.
- Implemented ScriptableObject-driven content panels, dynamic scoring, and dual-state feedback UI so non-developers could add lessons without code changes.

Arabtesting | Cairo, Egypt

VR/AR Unity Game Developer | Jul 2019 – Apr 2020

- Built an AR 3D coloring book with Vuforia and OpenCV — C# scripts downloaded AssetBundles at runtime and rendered live 3D models from scanned 2D drawings.
- Shipped an educational VR/AR mobile game to Google Play, letting users explore 3D animal models via Cardboard VR.

SELECTED PROJECTS

- **Shara71** — Unity tile-matching puzzle game published on both stores under ExaRoll Studio. Players progress across all seven UAE emirates, matching illustrated Emirati cultural symbols, foods, dress, and landmarks. Shipped for iOS and Android with progressive level difficulty and an all-ages content rating. [Google Play](#) | [App Store](#)
- **Kuwaitar** — Augmented reality education app built to the Kuwaiti primary-school curriculum, covering Islamic education and English for Grade 1. Turns printed lessons into interactive 3D content on students' devices, with ScriptableObject-driven lesson panels so non-developers can add material without code changes. [Video channel](#)
- **Ignite Virtual** — VR and AR education platform delivering secondary-school Biology and History curriculum units, children's soft-skills programs, and Quran modules through VR headsets, alongside turnkey VR lab installations for schools and universities. [Specify your role and which modules you built.] [ignite-virtual.com](#)
- **Xenon Blade** — 2D top-down hack-and-slash shipped to Google Play, with upgradeable weapons and wave-based enemy AI.
- **Wise Project** — interactive 2D physics games (Unity + Vyond) teaching electricity concepts to 10th and 11th graders.
- **ADHD VR** (graduation project, graded Excellent) — mobile VR room with interactive IQ tests designed to assess ADHD indicators in children.

TECHNICAL SKILLS

Engines & Languages: Unity 3D (Unity 6, URP), C#, Java (Android)

XR Platforms: OpenXR, XR Interaction Toolkit, Meta Quest, AR Foundation, Vuforia, ARCore, EasyAR, SteamVR, Google Cardboard

Systems & Tools: DOTween, TextMeshPro, AssetBundles & Addressables, ScriptableObjects, Photon (multiplayer), REST API integration, OpenCV, Git, WebGL & Android builds

Design & Process: Game Design Documents, UI/UX implementation, localization architecture (RTL/LTR), Agile workflows, Photoshop, After Effects

EDUCATION

B.Sc. Computer Science — Higher Technological Institute, Cairo, Egypt | May 2020
